

- Up to **3 kV** stand-off Switch - Switch
& Up to **5 kV** stand-off Switch - Coil
- **1 Form A, 2 Form A** or **1 Form B** configurations
- **3 V, 5 V & 12 V** coils with **optional internal diode**
- Insulation resistance **>10¹² Ω**
- Switching up to **0.7 A, 10 W**
- **Additional build options are available**
- Many benefits compared to industry standard relays
(see last page)
- Suitable for mixed signal semiconductor testing, medical electronic equipment testing, EV charge point testing, monitoring photovoltaic efficiency, in-circuit test equipment, and high voltage instrumentation

Note: Package Types 1 & 2 are the same size yet have different pin positions

Switch Ratings - Dry Switches

| 1 Form A (energize to make) | 1 Form B (energize to break) | 2 Form A (energize to make) |
|--|--|--------------------------------------|
| Stand-off 1.5kV, switching up to 1kV Stand-off 2kV, switching up to 1kV Stand-off 3kV, switching up to 1kV | Stand-off 1.5kV, switching up to 1kV Stand-off 2kV, switching up to 1kV | Stand-off 1.5kV, switching up to 1kV |

Series 219 switch ratings - contact ratings for each switch type

| Switch No | Switch form | Power rating | Max. switch current | Max. carry current | Max. switching volts (see Note ¹) | Min. stand-off volts (Switch - Switch) | Min. stand-off volts (Switch - Coil) | Life expectancy ops typical (see Note ²) | Operate time in bounce (max) | Release time | Special features |
|-----------|-------------|--------------|---------------------|--------------------|---|--|--------------------------------------|--|------------------------------|--------------|------------------|
| 1 | A or B | 10W | 0.7A | 1.25 A | 1000 | 1500 | 1500 | 10 ⁸ | 0.5 ms | 0.2 ms | High voltage |
| 2 | A or B | 10W | 0.7A | 1.25 A | 1000 | 2000 | 5000 | 10 ⁸ | 0.5 ms | 0.2 ms | High voltage |
| 3 | A | 10W | 0.7A | 1.25 A | 1000 | 3000 | 5000 | 10 ⁸ | 0.5 ms | 0.2 ms | High voltage |

Note¹: Switching Voltage

This high voltage rating is for **RESISTIVE loads only**. At these high voltages, even stray capacitance can generate very high current pulses, which can damage the contact plating causing welding of the reed switch. If there is capacitance in circuit, provision should be made to limit the surge, to within the current and power ratings of the relay.

Note²: Life Expectancy

The life of a reed relay depends upon the switch load and the end of life criteria. For example, for an 'end of life' contact resistance specification of 1Ω, switching low loads or when 'cold' switching, typical life is expected to be greater than 1x10⁸ ops. At higher voltages and the maximum load (resistive), typical life is 1x10⁷ ops. In the event of abusive conditions, e.g. high currents due to capacitive inrushes, this figure reduces considerably. Pickering will be pleased to perform life testing with any particular load conditions.

Operating Voltages

| Coil voltage - nominal | Must operate voltage - maximum at 25°C | Must release voltage - minimum at 25°C |
|------------------------|--|--|
| 3 V | 2.25 V | 0.3 V |
| 5 V | 3.75 V | 0.5 V |
| 12 V | 9 V | 1.2 V |

Environmental Specification/Mechanical Characteristics

In the table below, the upper temperature limit can be extended to +125 °C if the coil drive voltage is increased to accommodate the resistance/temperature coefficient of the copper coil winding. This is approximately 0.4% per °C. This means that at 125 °C the coil drive voltage will need to be increased by approximately $40 \times 0.4 = 16\%$ to maintain the required magnetic drive level. Please contact sales@pickeringrelay.com for assistance.

| | |
|--|-------------------|
| Operating Temperature Range | -40 °C to +105 °C |
| Storage Temperature Range | -40 °C to +125 °C |
| Shock Resistance | 50 g |
| Vibration Resistance (10 - 2000 Hz) | 20 g |
| Soldering Temperature (max) (10 s max) | 270 °C |
| Washability (Proper drying process is recommended) | Fully Sealed |

Contact Resistance

A characteristic of the switch used in this range is the contact resistance can increase over time if subjected to standoff voltages in the upper range of the specification. This does not affect the life expectancy but can result in contact resistances greater than 1 Ohm. In most high voltage applications this increase has no effect on performance but, in some mixed signal applications low and stable contact resistance is important.

The technical information shown in this data sheet could contain inaccuracies or typographical errors. This information may be periodically changed or updated and these changes will be included in future versions of this data sheet.

Coil Data and Type Numbers

| Device Type | Type Number | Coil (V) | Coil resistance | Max. contact resistance (initial) | Insulation resistance (minimum at 25 °C) (see Note ⁴) | | Capacitance (typical) (see Note ³) | |
|---|---------------|----------|-----------------|-----------------------------------|---|--------------------|--|--------------------|
| | | | | | Switch to coil | Across switch | Closed switch to coil | Across open switch |
| 1 Form A Switch No. 1 (1.5 kV) Package Type 1 | 219-1-A-3/1D | 3 | 100 Ω | 0.17 Ω | 10 ¹² Ω | 10 ¹² Ω | 2.5 pF | 0.1 pF |
| | 219-1-A-5/1D | 5 | 250 Ω | | | | | |
| | 219-1-A-12/1D | 12 | 750 Ω | | | | | |
| 1 Form A Switch No. 2 (2 kV) Package Type 2 | 219-1-A-3/2D | 3 | 75 Ω | 0.17 Ω | 10 ¹² Ω | 10 ¹² Ω | 2.5 pF | 0.1 pF |
| | 219-1-A-5/2D | 5 | 200 Ω | | | | | |
| | 219-1-A-12/2D | 12 | 500 Ω | | | | | |
| 1 Form A Switch No. 3 (3 kV) Package Type 3 | 219-1-A-3/3D | 3 | 50 Ω | 0.17 Ω | 10 ¹² Ω | 10 ¹² Ω | 2.0 pF | 0.1 pF |
| | 219-1-A-5/3D | 5 | 125 Ω | | | | | |
| | 219-1-A-12/3D | 12 | 400 Ω | | | | | |
| 2 Form A Switch No. 1 (1.5 kV) Package Type 6 | 219-2-A-3/1D | 3 | 50 Ω | 0.17 Ω | 10 ¹² Ω | 10 ¹² Ω | 2.5 pF | 0.1 pF |
| | 219-2-A-5/1D | 5 | 100 Ω | | | | | |
| | 219-2-A-12/1D | 12 | 400 Ω | | | | | |
| 1 Form B Switch No. 1 (1.5 kV) Package Type 4 | 219-1-B-3/1D | 3 | 50 Ω | 0.17 Ω | 10 ¹² Ω | 10 ¹² Ω | 2.5 pF | 0.1 pF |
| | 219-1-B-5/1D | 5 | 100 Ω | | | | | |
| | 219-1-B-12/1D | 12 | 400 Ω | | | | | |
| 1 Form B Switch No. 2 (2 kV) Package Type 5 | 219-1-B-3/2D | 3 | 50 Ω | 0.17 Ω | 10 ¹² Ω | 10 ¹² Ω | 2.5 pF | 0.1 pF |
| | 219-1-B-5/2D | 5 | 100 Ω | | | | | |
| | 219-1-B-12/2D | 12 | 400 Ω | | | | | |

When an internal diode is required, the suffix D is added to the part number as shown in the table.

Note³: Capacitance across open switch

This is measured with all other component leads connected to the guard terminal of the measuring bridge.

Note⁴: Insulation resistance

Insulation resistance will reduce at higher temperatures. For more information on temperature effects [click here](#), or [contact Pickering](#) for more in depth guidance.

Pin Configuration, Weights and Dimensional Data (dimensions in inches, millimeters in brackets)

Package Type 1

1 Form A

Weight: Typical 2.12 g

1 Form B

Weight: Typical 2.19 g

1 Form A

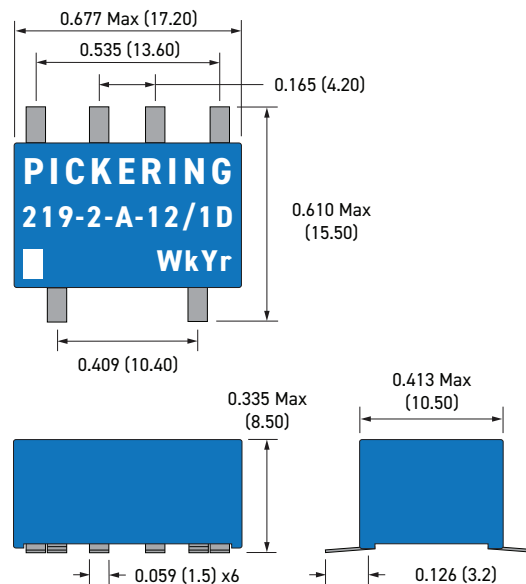

1 Form B

Package Type 2

2 Form A

Weight: Typical 2.39 g

2 Form A

Important: Where the optional internal diode is fitted or for all Form B types, the correct coil polarity must be observed, as shown by the + symbol on the schematics.

Note: A 1 cm space should be left between Form B types and other relays, as the magnetic field from the internal biasing magnet could slightly affect the sensitivity of the relay alongside.

PCB Footprints (dimensions in inches, millimeters in brackets)

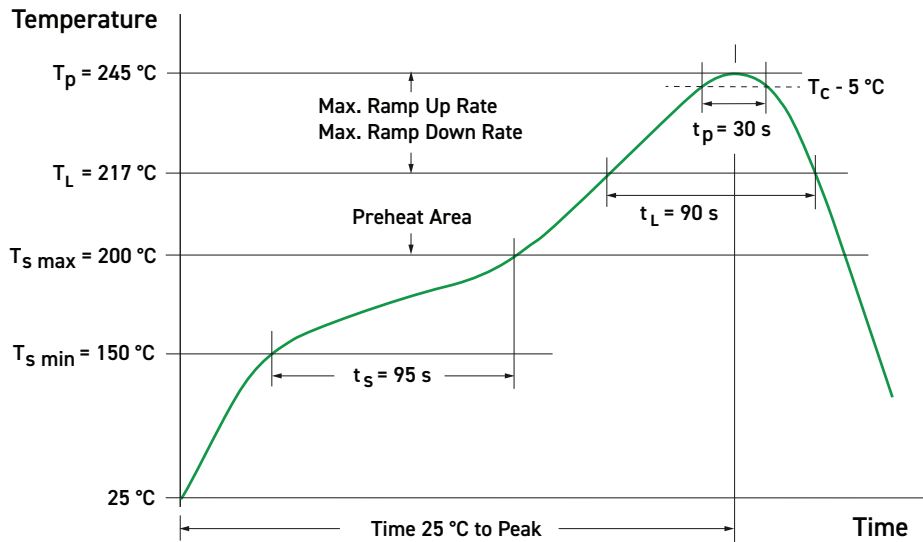

219-1-A and 219-1-B Footprints
1 Form A and 1 Form B
(Package Types 1, 2, 3, 4 and 5)

219-2-A Footprint
2 Form A
(Package Type 6)

Reflow Soldering: Recommended Profile and Parameters

SMT Soldering Profile based on IPC/JEDEC J-STD-020E

| Profile Feature | | Value |
|--|-----------|------------|
| Preheat Temperature Min | T_S min | 150 °C |
| Preheat Temperature Max | T_S max | 200 °C |
| Preheat Time t_S from T_S min to T_S max | t_S | 60 - 120 s |
| Ramp-up Rate (T_L to T_P) | | 3 °C/s max |
| Liquidous Temperature | T_L | 217 °C |
| Time t_L maintained above T_L | t_L | 60 - 150 s |

| Profile Feature | | Value |
|---|-------|---------------|
| Peak Package Body Temperature | T_P | 245 °C |
| Time within 5 °C of actual Peak Temperature | t_P | 20-30 s |
| Ramp-down Rate (T_L to T_P) | | 6 °C/s max |
| Time 25 °C to Peak Temperature | | 8 minutes max |
| Applied Cycles | | 2 cycles max |

Moisture Sensitivity of Surface Mount Reed Relays

Quality and reliability concerns regarding internal damage, cracks and delamination from the solder reflow process have demanded standardised procedures regarding moisture control for some surface mount devices. Pickering Series 219 Surface Mount Reed Relays are classified to IPC/JEDEC J-STD-020 MSL1, and thus dry packs and special procedures are not required.

Packing

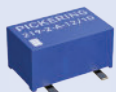

Pickering 219 Series relays can be provided in tape and reel format on request.

Shelf and Floor Life

Through their moisture sensitivity level 1 classification 219 Series relays have an “infinite floor life” when the conditions are 30 °C/85% RH.

Similar Relays Comparison

If the Series 219 is unsuitable for your application, Pickering also manufacture four series of thru-hole high voltage reed relays in various package sizes.

| Series Name | | 219-1-A | | | 219-2-A | | 219-1-B | |
|-----------------------|----------------|---|------|------|--|------|---|------|

Reed Relay Selection Tool

Because Pickering offer the largest range of high-quality reed relays, sometimes it can be difficult to find the right reed relay you require. That is why we created the Reed Relay Selector, this tool will help you narrow down our offering to get you the correct reed relay for your application. To try the tool today go to: pickeringrelay.com/reed-relay-selector-tool

Standard Build Options

The Series 219 Reed Relay is available with a number of standard build options to tailor it to your specific application. These options are detailed in the table below. If you decide to go ahead and specify one, or more, of these options you will be allocated a unique part number suffix.

| Mechanical Build Options | Electrical Build Options |
|---|--|
| Special pin configurations or pin lengths | Different coil resistance |
| Special print with customer's own part number or logo | Very low capacitance possibility |
| Custom packaging possibility | Different stand-off or switching voltage |
| | Operate or de-operate time |
| | Pulse capability |
| | Enhanced specifications |
| | Non-standard coil voltages and resistance figures |
| | Special Life testing under customer's specific load conditions |
| | Specific environmental requirements |
| | Controlled thermal EMF possibility |

Customization

If your specific requirements are not met by standard relay, or any of the standard build options, please speak to us to discuss producing a customized reed relay to service your specific application: pickeringrelay.com/contact

3D Models

Interactive 3D models of the complete range of Pickering relay products in STEP, IGS and SLDPR formats can be downloaded from the website: pickeringrelay.com/3d-models

Part Number Description: **219 - 1 - A - 5 / 1 D - xxx**

Series _____
Number of reeds _____
Switch form _____
Coil voltage _____
Switch number (see table on page 1) _____
Diode if fitted (omit if not required) _____
Unique suffix (if standard build option selected) _____

Help

If you need any technical advice or other help, please do not hesitate to contact our Technical Sales Department. We will always be pleased to discuss Pickering relays with you. email: techsales@pickeringrelay.com

10 Key Benefits of Pickering Reed Relays

| Key Benefit | Pickering Reed Relays | Typical Industry Reed Relays | |
|---|---|--|--|
| 1 Instrumentation Grade Reed Switches | Instrumentation Grade Reed Switches with vacuum sputtered Ruthenium plating to ensure stable, long life up to 5x10E9 operations. | Often low grade Reed Switches with electroplated Rhodium plating resulting in higher, less stable contact resistance. |  |
| 2 Formerless Coil Construction | Formerless coil construction increases the coil winding volume, maximizing magnetic efficiency, allowing the use of less sensitive reed switches resulting in optimal switching action and extended lifetime at operational extremes. | Use of bobbins decreases the coil winding volume, resulting in having less magnetic drive and a need to use more sensitive reed switches which are inherently less stable with greatly reduced restoring forces. |   Pickering former-less coil Typical industry coil wound on bobbin |
| 3 Magnetic Screening | Mu-metal magnetic screening (either external or internal), enables ultra-high PCB side-by-side packing densities with minimal magnetic interaction, saving significant cost and space. Pickering Mu-Metal magnetic screen - interaction approx. 5% | Lower cost reed relays have minimal or no magnetic screening, resulting in magnetic interaction issues causing changes in operating and release voltages, timing and contact resistance, causing switches to not operate at their nominal voltages. Typical industry screen - interaction approx. 30% |   X-Ray of Pickering mu-metal magnetic screen X-Ray of typical industry magnetic screen |
| 4 SoftCenter™ Technology | SoftCenter™ technology, provides maximum cushioned protection of the reed switch, minimising internal lifetime stresses and extending the working life and contact stability. | Transfer moulded reed relays (produced using high temperature/pressure), result in significant stresses to the glass reed switch which can cause the switch blades to deflect or misalign leading to changes in the operating characteristics, contact resistance stability and operating lifetime. |   Pickering soft center protection of the reed switch Typical industry thermo-setting hard moulded protection of the reed switch |
| 5 100% Dynamic Testing | 100% testing for all operating parameters including dynamic contact wave-shape analysis with full data scrutiny to maintain consistency. | Simple dc testing or just batch testing which may result in non-operational devices being supplied. | Dynamic Contact Resistance Test  |
| 6 100% Inspection at Every Stage of Manufacturing | Inspection at every stage of manufacturing maintaining high levels of quality. | Often limited batch inspection. |  |
| 7 100% Thermal Cycling | Stress testing of the manufacturing processes, from -20 °C to +85 °C to -20 °C, repeated 3 times. | Rarely included resulting in field failures. |  |
| 8 Flexible Manufacturing Process | Flexible manufacturing processes allow quick-turn manufacturing of small batches. | Mass production: Usually large batch sizes and with no quick-turn manufacturing. |  |
| 9 Custom Reed Relays | Our reed relays can be customized easily, e.g. special pin configurations, enhanced specifications, non-standard coil or resistance figures, special life testing, low capacitance, and more. | Limited ability to customize. |  |
| 10 Product Longevity | Pickering are committed to product longevity; our reed relays are manufactured and supported for more than 25 years from introduction, typically much longer. | Most other manufacturers discontinue parts when they reach a low sales threshold; costing purchasing and R&D a great deal of unnecessary time and money to redesign and maintain supply. |  |
